

Case Study: A Second Chance at Life – Altamas’ Kidney Transplant Journey

Background

Altamas is a twelve-year-old child whose life has been deeply impacted by chronic kidney disease. Since **22 February 2025**, his days have revolved not around school, friends, or play, but around frequent hospital visits and life-sustaining dialysis sessions. At an age meant for dreams and discovery, Altamas is instead fighting a battle for survival. For him and his family, each day brings a mix of resilience, uncertainty, and hope for a healthier future.

A Child’s Struggle

While most children dream of their future, Altamas spends hours each week connected to a dialysis machine—his lifeline. The physical toll is immense, but the emotional burden on his family is equally heavy. Watching their child endure pain and uncertainty has been deeply distressing, especially with limited financial resources.

Program Support

Through our healthcare initiative in 2025, **KRISHNAVI CHARITABLE FOUNDATION** has been providing dialysis support to **three children** suffering from critical kidney conditions at **Safdarjung Hospital, New Delhi**. Altamas is one of the beneficiaries of this program, receiving continuous medical care and support to help stabilize his condition and sustain his treatment journey.

A Ray of Hope

After thorough medical evaluation, **Dr. Shobha** recommended a **kidney transplant**—the only long-term solution that can give Altamas a chance at a normal, healthy life. In a powerful act of love and courage, a family member has stepped forward to donate a kidney.

The required **compatibility (matching) tests** have been conducted, and the family now waits anxiously for the results—holding on to hope that this transplant will be possible.

Our Intervention

We have been standing beside Altamas and his family at every step by providing:

- Regular dialysis sessions to sustain his life
- Essential medicines for kidney care
- Support for critical diagnostic tests, including transplant matching
- Continuous medical guidance and monitoring

The Urgent Need

While dialysis keeps Altamas alive, it is not a permanent solution. A **kidney transplant is urgently needed** to free him from this cycle and give him a real chance at childhood—a chance to go to school, to play, and to dream again.

However, the cost of transplant surgery, post-operative care, and lifelong medication is far beyond what his family can afford.

A Call for Support

Altamas' story is not just about illness—it is about hope, courage, and the possibility of transformation. With your support, we can help turn this possibility into reality.

Your contribution can:

- Help fund the life-saving kidney transplant
- Ensure proper post-surgery care and recovery
- Give Altamas the opportunity to live a healthier, fuller life

Impact

Every donation brings Altamas one step closer to a life free from dialysis—a life where he can simply be a child again.
